 **Data insights**

HIDE

The furthest behind group in experiencing any type of violence consists of respondents with the following circumstance(s): Age group 25-34 or Age group 35+, Rural residence, 1 or more children under age 5, Age group 35+. The group has an access rate of 64%.The furthest ahead group in experiencing any type of violence consists of respondents with the following circumstance(s): Age group 15-24, Fewer than 2 children under age 5. The group has an access rate of 45%.

The average access rate for Afghanistan is 55%.

The tree is produced through an algorithm that identifies the groups furthest behind. Moving from left to right, the population is split into smaller groups as long as a splitting criterion allows, or until the sample size becomes too small. The furthest behind group is highlighted in orange, and the furthest ahead group is highlighted in blue.
